If more than one search is submitted, please prioritize searches in order of need.

Please provide a detailed statement of the search topic, and describe as specifically as possible the subject matter to be searched. Include the elected species or structures, keywords, synonyms, acronyms, and registry numbers, and combine with the concept or utility of the invention. Define any terms that may have a special meaning. Give examples or relevant citations, authors, etc, if known. Please attach a copy of the cover sheet, pertinent claims, and abstract.

Title of Invention: Method and Apparatus for a Credibility Reporting System Augmenting an Online Exchange

Inventors (please provide full names): Mahesh Harpale

Earliest Priority Filing Date: June 30, 2000

**For Sequence Searches Only* Please include all pertinent information (parent, child, divisional, or issued patent numbers) along with the appropriate serial number.*

Searches to date:

- **EAST SEARCH** as Shown.

BACKGROUND OF INVENTION

Claims 3 and 4 are directed a method and system for displaying rating analysis of a participant in an on-line transaction across multiple independent marketplaces. For example, a first participant (buyer, seller, merchant, vendor, etc.) registers under two different names in two different marketplaces (eBay, Ubid, etc.) that participant's actions for various transactions in both marketplaces are collected and analyzed to create a rating so that other participants in either marketplace can decide to do business with the first participant.

Please provide an NPL search for claims 3 and 4 and an inventor search. All references must be before the priority date as shown above.

Voluntary Results Feedback Form

➤ I am an examiner in Workgroup: Example: 3620 (optional)

➤ Relevant prior art **found**, search results used as follows:

- ☐ 102 rejection
- ☐ 103 rejection
- ☐ Cited as being of interest.
- ☐ Helped examiner better understand the invention.
- ☐ Helped examiner better understand the state of the art in their technology.

Types of relevant prior art found:

- ☐ Foreign Patent(s)
- ☐ Non-Patent Literature
(journal articles, conference proceedings, new product announcements etc.)

➤ Relevant prior art **not found**:

- ☐ Results verified the lack of relevant prior art (helped determine patentability).
- ☐ Results were not useful in determining patentability or understanding the invention.

... The mechanism that we have emphasized as creating the hypothesized
performance effects is the implicit **transfer** of **status across**
interorganizational **exchange** relations (such as intercorporate equity and
alliance ties), which builds confidence about the quality of a new venture
among potential customers, suppliers, employees, collaborators, and
investors. Through this **process** , young companies with prominent exchange
partners gain an advantage in the competition for resources. But there is
an alternative process that...

ABSTRACT: Part of a cover story on **computer** networks and modeling in science. An influx of new users and cultures is rapidly transforming the **Internet** 's traditional open information **exchange** . Expansion is **taking** place at a **rate** of 10 to 20 percent a month, and the **number** of users worldwide now exceeds 20 million. Some of the newcomers want to use the ...

...e-marketplaces. Internet market developers and exchange managers are emerging in large numbers. They perform **many** services, including information **exchange**, **online communities**, spot bidding in **online auctions**, full service procurement, and inventory management. The e-marketplace can **level** the playing field, and has the potential to allow all suppliers to compete for business equally. Many companies that have gotten their internal enterprise **computing** systems under control are now turning their attention to integration and automation **processes** conducted between companies. Direct purchasing is the core of the supply chain, and direct materials...

...Supply chain automation employs technology to lower the number of, or eliminate altogether, the manual **processes** required for purchasing. Among technologies used are forecasting systems, electronic data interchange (EDI), and extranets...

...effective supply chain systems they must have a comprehensive and strategic view of the purchasing **process**.

... determining an
appropriate level of encryption for a transmission and
allowing that transmission to be **transmitted** only if
that **level** is provided;
Figure 18 is an illustration of example policy
data specifying the required encryption...

...the flow of
information on a computer system. It provides
facilities to manage the security **level** at which
transmissions occur, facilities to record on-line
transactions and to refer transactions that...client itself, examination
of
transmission content, to extract password information
or to determine the desired **level** of encryption for
example, may **take** place before the content has been
5 encrypted ready for transmission, or indeed after it
has been received and unencrypted.
Figure 1 shows the relationship **between** service

providers, typically companies **selling** goods and services **over** the **Internet** 10, and users wishing to purchase such goods or services. Users equipped with web browsers...necessary, prevent the data from being transmitted. Encryption and decryption on a secure link will **take** place after **point** C and before **point** A in Figure 3 respectively. Thus, the BHO may analyse the data

- 26

before it...user, and stores the identified passwords and usernames in a data repository. Preferably this is **central database** 42. This allows the passwords of any user to be recalled regardless of the terminal at which the user logs on, providing the terminal has access to the **central database** . Any identified passwords and usernames are stored in the database along with the field names...

...and administrative time. With the preferred system, the password information may be recovered from the **central database** , so that access to web sites is not lost. Figure 6 is a flow diagram...

...In step S150, the plug-in module begins and parses the data about to be **transmitted** to the web server from the browser. This occurs at **point** IC' in

- 33

the process illustrated in Figure 3. Control then passes to step S152...

...does not detect a username or a password in the data which is to be **transmitted** , control passes to step S158 at which **point** the module exits and control is passed back to **point** IC' in Figure

3 The browser may then **transmit** the data to the web server. If however, a username or a password is detected...such as client, amount, date, goods and so on. This information is stored in a **central database**

- 47

to which all users of the system have access. The preferred system also provides ...all data transmitted to a web page which has been identified as that of an **on - line trading** company. other indications might be an identified credit card **number** , an electronic receipt, an e-mail acknowledging the sale, use of a digital certificate, in...

...email sent to orders@abc.com. The preferred system records the transaction details in a **centralised common database** 42. Additionally, the **database** may be a local file or a

- 62

service on a network. The information stored...

...a remote site. In the case of a web browser implementation this will be after **point** A or after **point** C respectively as **shown** in Figure 3; in the case of implementation in an e-mail client it will be after **point** A or B respectively as **shown** in Figure S.
